

# Drone814: Emergency Help From the Sky – Built for Johnstown

Drone814 is a locally driven, US Department of Transportation-sponsored project using FAA-approved drones to deliver life-saving medical supplies (like AEDs, EPIPENS, and Narcan) to 911 emergency scenes – fast.

We know new tech can raise questions. That's why we're building this with local input, transparency, and clear boundaries. Here's what you need to know:

## Privacy Comes First

### *We Fly to Save Lives*

- No Surveillance: Drones fly only in response to 911 calls.
- Data Collection: Drone814 does not collect personal data. Cambria County Emergency Services only collects data used during a routine emergency dispatch.
- No Random Flights: No patrols. No watching. No wandering.

## Safety You Can Count On

### *It's not replacing 911 – it's helping beat the clock.*

- FAA-Regulated: All flights meet strict federal safety standards.
- Locally Operated: Run by people you already trust – local responders.

## Built With You, Not For You

### *This isn't Silicon Valley tech. It's Johnstown and it's for our community.*

- Community First: We host events, demos, and listening sessions.
- Local Voices Matter: Feedback shapes how we fly and serve.
- Clear Oversight: We're accountable to Johnstown – not outside organizations

## Hashtags You'll See Around
